

Band of Agents

Post-Merge Delivery Pipeline

Track 2: Multi-Agent Software Development

Band of Agents Hackathon — June 2026

The Problem

Code is merged. Now what?

Documentation goes stale.

Testing gets deprioritized.

Releases get delayed.

Existing AI tools handle planning → coding → review.

Nobody handles what comes after the merge.

The Solution

Four specialist agents that collaborate through Band to automate the post-merge pipeline:

 Documentation →  QA Strategy →  Release
Coordination

Not a thin wrapper. **Genuine multi-agent coordination.**

The Four Agents

Agent	Role	Band Interaction
Pipeline Orchestrator	Receives tasks, delegates, tracks progress	<code>band_lookup_peers</code> , <code>band_add_participant</code> , <code>band_send_event</code>
Technical Writer	Generates docs, README	<code>@mentions QA</code> , <code>band store memory</code>

Pipeline Flow

Why This Is Meaningful Band Usage

Not a thin wrapper — agents collaborate through
Band's platform:

1. **@mention routing** — agents discover and address each other
2. **Dynamic peer discovery** — `band_lookup_peers` at runtime
3. **Room management** — `band_add_participant`,
`band_remove_participant`

Tech Stack

Component	Technology	Why
Agent framework	LangGraph via band-sdk[langgraph]	Mature adapter, StateGraph support
Collaboration	Band.ai (Pro)	@mentions, discovery, rooms, events
	Open 2.5.14B	Open, fast,

Live Demo

**Four agents. One chat. Zero manual
coordination.**

Judging Criteria Mapping

Criteria

How We Meet It

Application of Technology

4 agents collaborating via @mentions, peer discovery, room management, event streams, memory — Band is the collaboration layer, not a notification channel

Presentation

Clear pipeline: Orchestrator → TW → QA → RC, each agent has a

What We Learned

- **Qwen 2.5 14B** is the sweet spot: 72B too slow (5-10 min), 7B unreliable tool calls
- **Agent identity must be explicit** — without "YOU ARE X, NOT Y" prompts, models confuse roles
- **Handoff flow must be CRITICAL** in prompts or agents skip steps
- **Band memories require Enterprise** — Pro returns 403; agents gracefully skip
- **Band's adapter deprecations** —
enable execution reporting →

Band of Agents

Post-merge delivery, automated.
